

EcoSmart[™] Retrofit Kit

EcoSmart Evaporator Control Makes a Difference

The RDT EcoSmart is an electronically operated evaporator controller designed to save energy in walk-in freezer and cooler applications. EcoSmart delivers true on-demand defrost, reduced compressor runtime, reduced fan cycling, and full alarm notifications by text or email. Its built-in connectivity allows for continuous remote monitoring and real-time system control from virtually anywhere.

The EcoSmart Retrofit Kit is available now. This complete upgrade package brings modern connectivity to existing walk-ins and refrigerated rooms, improving efficiency and enhancing the operating environment. In addition to the EcoSmart controller, the kit includes a mounting box, wire harness, pressure transducer, and temperature sensor, giving operators a ready-to-install solution for connected, intelligent refrigeration.

Eliminate Frost Buildup

BEFORE:

Refrigerated spaces can often experience a variety of issues related to the build-up of frost on evaporator coils, unit cooler cabinets, walk-in ceilings and stored product.

AFTER:

The EcoSmart controller removes excessive frost build-up which is eliminated through adaptive refrigeration control. The room cools more evenly, food quality is preserved and energy is saved.

EcoSmart gives you confidence in your cold storage. With immediate text and email alerts, you'll know the moment something isn't right, protecting your product, your budget, and your peace of mind.
